

6

31. (amended) A window sash assembly comprising:

a sash having a header rail and a stile joined at a corner and having an opening in the sash; [and]

- a tilt latch disposed in the opening including a housing having side walls, a rear wall, and a bottom wall;
 - a top wall extending beyond the side walls and rear wall to define a flange;
- a protuberance projecting from each of the side walls, each protuberance
 having [an] <u>a pointed</u> apex spaced from the flange to define respective gaps for
 receiving the edges therein; and
- a bolt movably disposed in the housing and adapted for engaging a slide channel.
